

Automatic Population of Sheets

MAPoS allows you to select items from the stock file to sell , automatically , at a given frequency .
Sell an item once at a specific time and date or every 1/4 of an hour, or anyone of a range of frequencies in-between.

- NewsRounds
- PMS (Room charges)
- Car Parks
- Kids Areas
- Gyms/Saunas
- Clubs
- Subscriptions.

Simply by adding an item , entering a start date / end date and then telling MAPoS what frequency to sell over. The unique MAPoS API will take over and sell at the given times.
MAPoS even works in retrospect so if the power goes off , the next time the API runs it will realize what it has missed and catch up.

Scenario:-

Mrs Smith arrives at the hotel for Dinner , Bed breakfast and requests a News Of The World daily.

Open Apollo , enter the customer name, address as normal.

The open MAPoS and sell the room charge and Newspaper to be populated at 6am each morning of her stay . Leave MAPoS to
